Pharmaceutical Chemical Analysis: Methods for Identification and Limit Tests Ole Pedersen

Complete, referenced information in an easy-to-use format

Many of the monographs in the *European Pharmacopoeia*, the industry standard test for certain groups of ingredients and excipients, do not describe the tests in full, but reference general methods based on test-tube chemistry. When a test fails, you need to know what went wrong, how it can be fixed, and how to convince QA/QC that the tested material is okay. This gives you little time to dig out the relevant scientific literature, literature that is often so old it doesn't show up in an electronic search.

Making this knowledge easily accessible and directly applicable to work in the lab, **Pharmaceutical Chemical Analysis: Methods for Limit Tests and Identifications** explains the purpose of these older tests, the chemistry involved, and hazards to avoid. The book covers the identification of ions and functional groups tests and limit tests respectively. It covers subjects relevant to all the pharmacopoeial identification/limit test and then goes on to describe the individual tests in chapters organized and named as they appear in the *European Pharmacopoeia*. Each chapter begins with a short discussion on the purpose and rationale of the tests, followed by a review of the physical and chemical characters of the target ion or compound. The author describes the chemical background and logic of the individual procedural steps of the test with formulas and reaction and provides tips on the strengths and weaknesses of these techniques in terms of specificity, ruggedness, and potential procedural pitfalls.

Strict regulatory requirements and economic pressures make the pharmaceutical industry understandably reluctant to replace a test that is simple, cheap, and performs well with expensive, unvalidated instrumental techniques. This resource bridges the gap by providing an in-depth understanding of the principles behind the *European Pharmacopoeia* tests and how to use them, saving you valuable production time.

From reader reviews:

Ricky Streeter:

Reading a reserve tends to be new life style with this era globalization. With examining you can get a lot of information that could give you benefit in your life. Along with book everyone in this world could share their idea. Textbooks can also inspire a lot of people. Plenty of author can inspire their very own reader with their story or even their experience. Not only the storyline that share in the books. But also they write about the data about something that you need instance. How to get the good score toefl, or how to teach your sons or daughters, there are many kinds of book which exist now. The authors nowadays always try to improve their talent in writing, they also doing some study before they write to the book. One of them is this Pharmaceutical Chemical Analysis: Methods for Identification and Limit Tests.

Mable Garza:

Spent a free the perfect time to be fun activity to try and do! A lot of people spent their spare time with their family, or their very own friends. Usually they carrying out activity like watching television, going to beach, or picnic inside the park. They actually doing same thing every week. Do you feel it? Will you something different to fill your own free time/ holiday? Can be reading a book is usually option to fill your free of charge time/ holiday. The first thing that you will ask may be what kinds of publication that you should read. If you want to consider look for book, may be the guide untitled Pharmaceutical Chemical Analysis: Methods for Identification and Limit Tests can be good book to read. May be it can be best activity to you.

Harry Branham:

What is your hobby? Have you heard this question when you got pupils? We believe that that concern was given by teacher to their students. Many kinds of hobby, Every individual has different hobby. Therefore you know that little person just like reading or as looking at become their hobby. You have to know that reading is very important along with book as to be the matter. Book is important thing to incorporate you knowledge, except your current teacher or lecturer. You find good news or update with regards to something by book. Many kinds of books that can you choose to adopt be your object. One of them is actually Pharmaceutical Chemical Analysis: Methods for Identification and Limit Tests.

Henry Hedrick:

Some people said that they feel weary when they reading a guide. They are directly felt it when they get a half regions of the book. You can choose the actual book Pharmaceutical Chemical Analysis: Methods for Identification and Limit Tests to make your reading is interesting. Your current skill of reading skill is developing when you similar to reading. Try to choose simple book to make you enjoy to study it and mingle the opinion about book and examining especially. It is to be very first opinion for you to like to available a book and go through it. Beside that the guide Pharmaceutical Chemical Analysis: Methods for Identification and Limit Tests can to be a newly purchased friend when you're experience alone and confuse with the

information must you're doing of this time.
